

High speed concrete laying from Maxwell

■ Full fast flow range on display

MAXWELL CONCRETE has been producing and supplying agricultural precast since the 1960s. Maxwell Concrete is exhibiting a vast array of new products at the Scottish Farm Machinery Show. Debuting at the show will be a full range of Fast Flow Drinkers designed to meet the demands of dairy farming, providing a refill rate of up to 280litres/minute and available in 1200, 750 and 300litre capacities.

On display will be an interesting spectrum of agricultural products available to the Scottish farmer, including cattle slats, prestressed wall panels for stock, grain or silage, free-standing retaining walls and water storage tanks.

If you are interested in seeing how the Northern Irish can lay 220 tonnes of concrete in 1.5 minutes then you are very welcome to visit our stand in Hall 1, H113 – H114 where there will be sales and technical representatives to advise you on the full range of products.
